

# Bangalore Traffic and Software Development

## About Me

Headed solution architecting teams of large enterprise products.

Co founder of Usability and Design consulting startup Lakeside Lab

Father of Design Driven Development (D3)

**Not only Bangalore, even Bangalore traffic has a unique connection with Software Development.**

# On Road

In a two-lanes road,  
we try with 10 lanes  
of vehicles

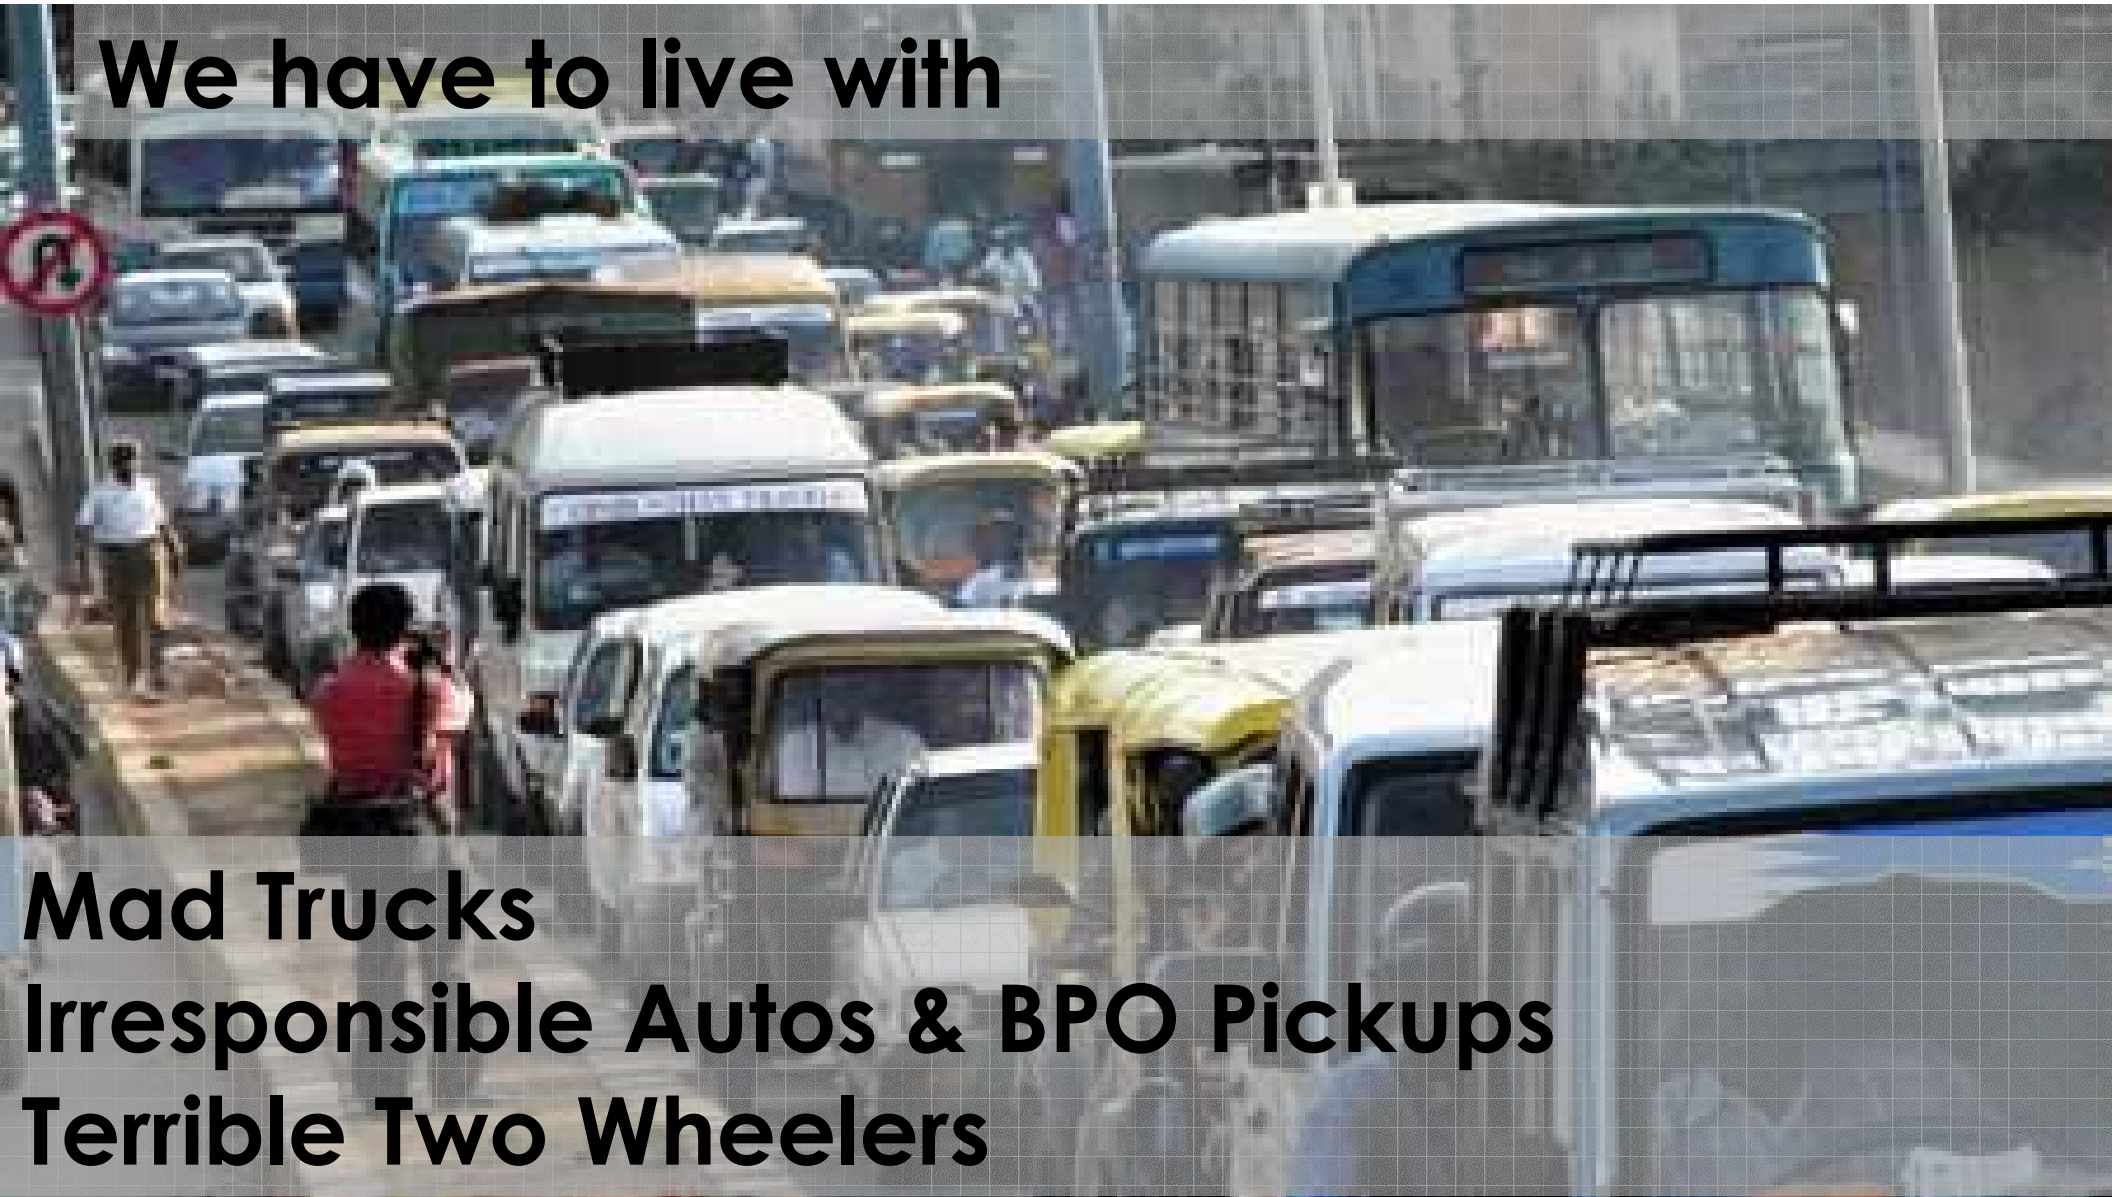

# At Office

**In one day,**  
we try to finish 10  
days of work

**On Road**

**We have to live with**

**Mad Trucks**  
**Irresponsible Autos & BPO Pickups**  
**Terrible Two Wheelers**

**At Office**

**We have to live with**

**Mad Requirements**, which need not be developed at all  
**Irresponsible defects**, which comes just before you send to the client  
**Terrible last minute discovery** of something, which is not implemented

# On Road

You don't know from where, how vehicles will land before you. You live in a fear of hit by someone

# At Office

You don't know when requirements will change.  
You live in frustration with reworks, reworks and  
more reworks.

The result is  
unpredictability and jam.

Not just problem, even  
solution is same.

The current Infrastructure is an issue. But the real solutions is not just on expanding roads.

Regulate. Responsible. Practical.

Expand Infrastructure.  
Regulate Vehicles.  
Be Responsible while Driving.  
Be Practical and Don't Bang Horn.

Regulate Requirements.  
Be Responsible.  
Be Practical (Unfortunately, we  
have only 24 hrs a day).
